Technical Skills

Cloud & DevOps:	AWS (EC2, VPC, RDS, S3, IAM, CloudWatch, CloudFront, WAF), Azure (Basics – VM, Storage, Networking), GCP (Basics – Compute Engine, Cloud Storage, IAM), Terraform, OpenTofu, Ansible
Monitoring & Observability:	Prometheus, Grafana, CloudWatch
Containerization & Orchestration:	Docker, Docker Compose, Kubernetes, OpenShift, Helm
CI/CD & Automation:	GitHub Actions, GitLab CI/CD, Jenkins, Maven, SonarQube, ArgoCD (GitOps)
Programming Languages:	Python (Boto3), Bash, JavaScript, Node.js
Database Management:	MySQL, Amazon RDS, DynamoDB
Tools & Platforms:	Git, GitHub, GitLab, Visual Studio Code, Trivy, Make

Projects

Terraform-Based AWS Infrastructure & Application Deployment

Cloud & DevOps Services: Terraform, AWS (VPC, EC2, ALB, ASG, RDS, IAM), Nginx, GitHub Actions, Jenkins, Maven, SonarQube, Prometheus, Grafana

- Automated AWS infrastructure using **Terraform** (VPC, EC2, ALB, Auto Scaling, RDS), eliminating manual provisioning.
- Designed a **highly available architecture** with public/private subnets and load balancers for scalability and fault tolerance.
- Deployed **React frontend and Node.js backend** on EC2 using **Nginx reverse proxy** for internal traffic routing.
- Implemented **CI/CD pipelines with GitHub Actions** to automate build and deployment workflows.
- Applied **security best practices** (IAM roles, security groups, bastion host) and monitored systems using **Grafana & Prometheus**.
- Implemented CI/CD pipeline with **Jenkins** integrating **Maven** build and **SonarQube** quality gates

AWS Scalable Full-Stack Deployment on AWS with Monitoring & Security Hardening

Cloud & DevOps Services: AWS (VPC, EC2, SG, ASG, ALB/NLB, RDS(MYSQL/Aurora), S3, IAM, SSM, CloudWatch, SNS, Lambda, WAF, CloudFront, ACM, KMS), Linux, systemd, Slack Webhooks

- Designed and deployed a Multi-AZ AWS architecture using **VPC**, **EC2**, **ALB**, **NLB**, **Auto Scaling Groups**, and **RDS**, ensuring high availability and fault tolerance.
- Implemented a self-healing and scalable backend using **Launch Templates**, **ASG health checks**, and **Lifecycle Hooks** to ensure zero-downtime deployments.
- Built a real-time monitoring and alerting pipeline using **CloudWatch Logs**, **Metric Filters**, Alarms, SNS, and **AWS Lambda** integrated with **Slack** notifications.
- Secured infrastructure using **IAM** least privilege, **SSM** Parameter Store (**KMS encryption**), **AWS WAF**, and private subnet isolation, ensuring no public backend or database exposure.
- Improved performance and cost efficiency using **CloudFront CDN**, **ACM HTTPS**, Scheduled Scaling, and optimized **EBS storage**, aligning with DevOps best practices.

CI/CD and GitOps Pipeline for Spring Boot Application Using Jenkins and Kubernetes

Cloud & DevOps Services: Jenkins, Docker, Amazon Web Services (EC2, S3, IAM), Linux, GitHub, Kubernetes, Argo CD, Apache Maven, Trivy, Slack

- Built an end-to-end **CI/CD + GitOps pipeline using Jenkins** for Spring Boot applications, automating code checkout, build, testing, and deployment workflows.
- Integrated **Docker, DockerHub, and AWS S3** for containerization and artifact storage, enabling versioned builds and scalable application delivery.
- Implemented **GitOps-based deployment using ArgoCD**, automating Kubernetes deployments by updating manifests through a downstream Jenkins pipeline.
- Incorporated **Trivy for container image security scanning** and configured **Slack notifications** for real-time CI/CD pipeline status updates.

Education

Bachelor of Technology in Computer Science 2022 – 2026
Eklavya University *Damoh,*
India CGPA – 8.0/10
